

### BFA-501 - Connector piece

1	Visual representation of STRCTRA profiles
2	Connector piece with spring-loaded spacer
3	Profile spacing at rest, 10 mm.
4	Compensates for expansion via spring section.

The BFA-501 coupling piece is **compatible with all profiles** for which its use is recommended. It is strongly **recommended that this be used for all profile connections**. This solution ensures that the profiles **are always coupled with a 10 mm expansion joint**, whilst also ensuring that the working surfaces of the profiles **fit together perfectly**. Only in facade applications where the joints is this not required / applicable.
